# **SafeGAIL**

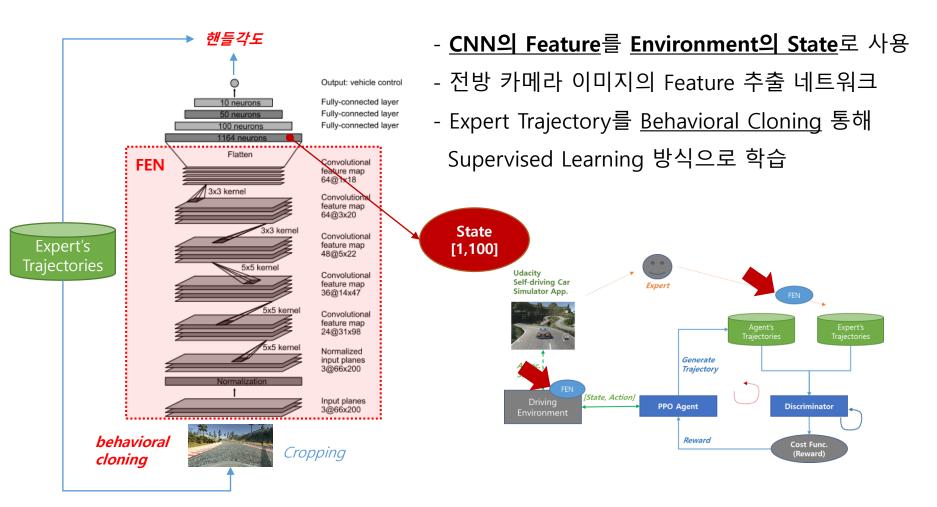

Safe Imitation Learning for Self-driving Cars

DLC 1기 강화학습 정 상 용

- 목표: PPO Agent가 Imitation Learning통해 <u>자율주행 시뮬레이터를 운전</u>하도록 학습시킴
- Trajectory: [State(Image Feature), Action(운전대)] 의 연속세트

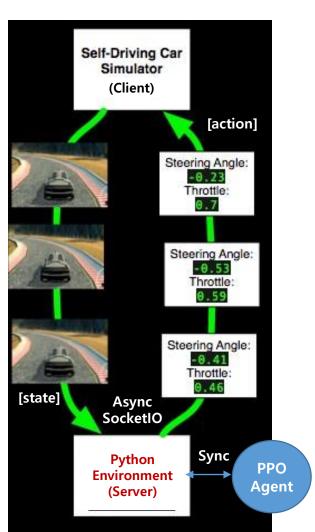

#### **FEN(Feature Extraction Network)**

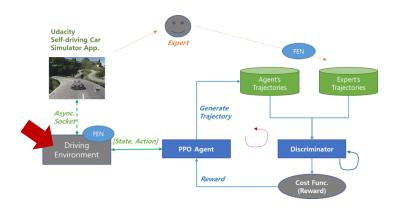

Reference: End to End Learning for Self-Driving Cars, Mariusz(nVidia), 2016

## [완료] Contribution #2: Driving Simulator 구현

#### 자율주행 시뮬레이터용 Environment Server 개발

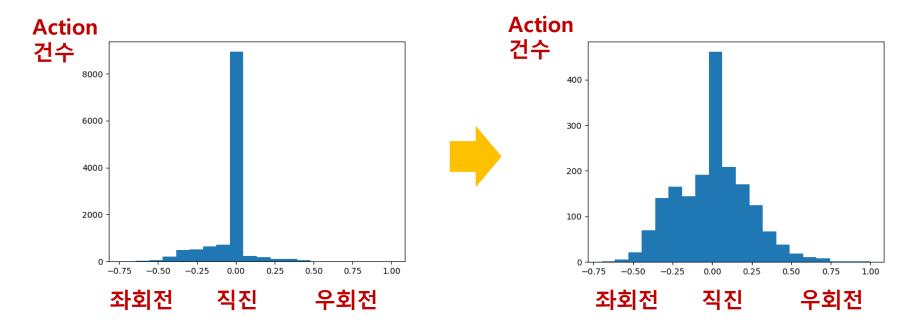

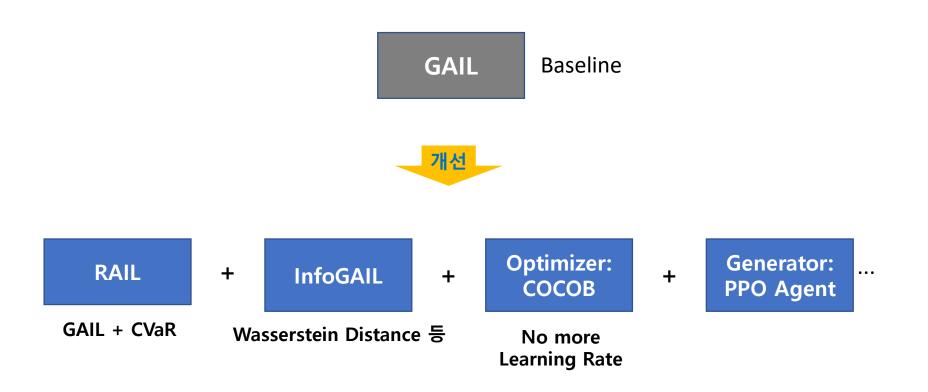

- Udacity Self-driving Simulator와 Socket통신 가능
- Simulator는 비동기(Async.) 통신 방식임
- 동기(Sync.) 실행 방식인 Agent와 Communication 위해 별도의 Environment Server개발
- Episode 기준: 속도가 감속될 때 한 Trajectory 종료

## 트랙 특성 상 좌회전과 직진이 많음

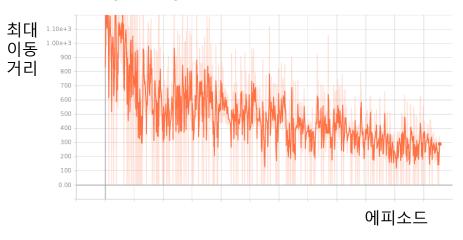

#### Action Imbalance 해결

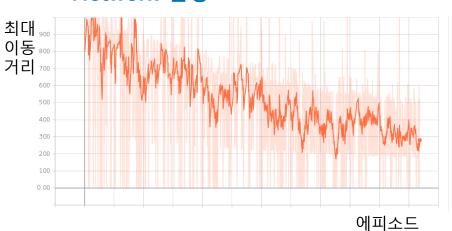

# [문제] GAIL(Baseline)에서 <u>학습이 안됨</u>

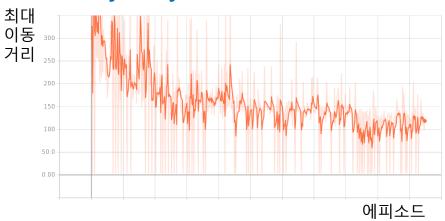

### - Trajectory 전처리

#### - Network 변경

#### - Trajectory 데이터 량 증가

'Cost Function 개선 시도 중...'
